Technic Releases New Immersion Silver Process: Argentomerse NC

Cranston RI, USA: Technic announces the release of Argentomerse NC, a nitrate-free immersion silver process for use as a solderable finish on printed circuit boards and other electronic devices. Operating at a slightly alkaline pH, Argentomerse NC produces a thin, uniform deposit that meets the requirements of IPC-4553. This unique formula, unlike acidic nitrate-based systems, has a high tolerance for contaminants like chloride and copper. When coupled with Tarniban 60 Post Dip (metallic anti-tarnish protection) Argentomerse NC will provide 12 months of shelf life under normal storage conditions.

For information on this and other Technic products go to www.technic.com or contact Technic at (401) 781-6100.

For over 50 years, Technic has been a worldwide supplier of both plating chemistry and equipment. Today, Technic is a global supplier of proprietary chemistries, imaging products and specialized custom plating equipment to the electronic component, printed circuit board, semiconductor, and general metal finishing industries.
