Technic Announces the Release of Goldeneye Nickel EF

Cranston, RI - Technic's Goldeneye Nickel EF is an advanced nickel electroplating process specifically designed to produce fully bright, lustrous nickel deposits over a wide range of current densities. The ability to produce ductile heavy deposits with very low stress makes this process especially suitable for electroforming applications.

“Customer feedback in ongoing field installations has been very positive, with key advantages in plating rate, internal deposit stress, and superior ductility at high thickness. These characteristics are especially relevant for the electroforming market when compared to traditional sulfamate nickel products.”

- George Federman, Vice President of Project Development

Technic supplies a number of Goldeneye Nickel products that are currently in high volume production globally. The products are noted for superior thickness distribution, improved corrosion resistance, and lower waste treatment costs. Goldeneye Nickel EF is the latest formulation advance in this product series.

Availability: North America, Asia Pacific, Europe

About Technic

Technic Inc. is a Rhode Island based corporation with over 950 employees worldwide. For over 75 years, Technic has been a global supplier of specialty chemicals, custom finishing equipment, engineered powders, and analytical control systems to the semiconductor, electronic component, printed circuit board, industrial finishing, and decorative industries. Technic is also a major supplier of engineered metal powders to the solar industry.
