Superior Processing Technologies for Medical Manufacturing

Clearwater, FL - In today's highly competitive landscape, medical device manufacturers are under pressure to innovate faster, while maintaining high standards of efficiency, precision and accuracy.

Technic Equipment provides advanced manual and automated solutions for manufacturers looking to take their production capabilities to the next level.

Technic's MP500 Automated Electropolishing and Type II/Type III Anodizing are high-throughput wet processing systems that offer complete automation of the Electropolishing and Titanium Anodizing processes. They are fully compatible with any commercially available electropolishing/anodizing chemistry, alkaline/acidic cleaning solutions, etching/picking solutions and citric acid solutions.

Technic's MP500 Automated Systems feature a user-friendly touch-screen HMI, that allows monitoring of all process parameters, as well as ease of operation and learning for new operators, supervisors, and engineers.

Technic Equipment works one-on-one with customers in this highly specialized industry, providing unparalleled commitment to finding the best fit for specific production requirements.

Thanks to their unique characteristics and ease of operation, Technic's MP500 systems have a proven record of increasing production capabilities and lowering costs through cutting-edge innovation and design.

About Technic

Technic Inc. is a Rhode Island based corporation with over 950 employees worldwide. For 80 years, Technic has been a global supplier of specialty chemicals, custom finishing equipment, engineered powders, and analytical control systems to the semiconductor, electronic component, printed circuit board, industrial finishing, and decorative industries.
