## New Cyanide-Free Silver Plating Process from Technic Meets Environmental Responsibility Standards

Cranston, RI, USA – Technic announces the release of its new cyanide-free silver plating process chemistry **Technisilver Cyless® II W**, designed for general metal finishing, decorative, and electronic component/connector applications. **Cyless® II W** addresses the global demand for an environmentally-safe, high-performance silver process.

**Cyless® II W** is a significant addition to Technic's existing line of cyanide-free products. The process produces a bright, non-yellow appearance with even distribution. Easily controlled adjustments provide a bright or semi-bright finish, as desired. This high-performing alternative to existing cyanide processes demonstrates Technic's ongoing commitment to offering environmentally responsible advanced finishing solutions.

"Where typically cyanide-free silver plating products suffer from a yellowish or dull deposit appearance, **Technisilver Cyless® II-W** produces a clean, bright to semi-bright finish. We expect our high-performing, non-cyanide process to have a significant impact in key manufacturing regions around the world where environmental regulations have become more stringent, and the demand for quality remains high".

- Rob Schetty, *Vice President, Technic Advanced Technology Division*
