

TechniPrint cleaning solution is an eco-friendly, high-speed, soluble support cleaner with significant benefits in both time and waste product management. Regardless of the scale of your operation, TechniPrint offers a number of advantages.

#### **Fast**

Time is perhaps your most precious commodity; TechniPrint has proven in production to perform up to 400% faster than the leading competitors.

#### **Less Waste**

TechniPrint has been formulated to solidify soluble support waste, leaving solid material and a clarified solution with a pH of less than 9. The end result is significantly less disposal volume and a liquid solution meeting regulatory statutes for disposal down the drain.\*

\*Check local regulations for complete compliance.

#### **No Guesswork**

TechniPrint will change color when it is fully loaded and ready to be changed. No analytical equipment or guessing required.

#### **Versatile**

TechniPrint 3D Support Cleaner performs equally well across all support material removal applications in volumes from as low as 1 gallon to as high as 500 gallons.
