Technic Equipment Expands Drying Solutions with Harter Collaboration

Pawtucket, RI – Technic Equipment, recognized for its advanced electroplating systems and automated surface finishing technologies, has announced the expansion of its portfolio with the addition of high-efficiency drying systems through a new collaboration with Harter GmbH.

Harter, a German-based leader in energy-efficient drying solutions, brings innovative low-temperature drying technology to Technic's offerings. This enhancement allows Technic to provide customers with complete, end-to-end surface finishing solutions—from plating to drying—with improved energy efficiency and environmental performance.

“Our focus has always been on delivering integrated systems that support the entire surface finishing process. Partnering with Harter allows us to offer seamless system integration for both parts processing and waste treatment—helping our customers improve efficiency, reduce environmental impact, and streamline their operations.”

– **Peter Ribbans**, General Manager/VP, Technic Equipment

The new offering includes modular drying systems for precision component drying as well as advanced sludge drying units used in wastewater treatment applications. These systems complement Technic's core electroplating technologies and serve a wide range of industries including electronics, aerospace, medical, and general manufacturing.
