

For immediate release

Technic Showcases Advanced Surface Finishing Systems at FABTECH 2025

Technic, a global leader in high-performance metal finishing solutions and advanced processing automation technologies, is excited to participate in [FABTECH 2025](#), North America's premier event for metal forming, fabricating, welding, and finishing, taking place on **September 8–11** at McCormick Place in Chicago.

Stop by **booth #D40765** to discover Technic's advanced systems, designed to meet the exacting standards of today's manufacturers across the aerospace, medical, and electronics industries. The [Laboratory Anodizing Mini-Plant \(LAMP\)](#) will be on display; equipped with advanced process controls, including programmable rectifier, integrated temperature management, and a modular tank layout, this compact anodizing line is ideally suited for R&D settings as well as production-scale process development.

For manufacturers seeking to modernize electroplating operations, the [MP300](#) provides a patented, single-piece flow plating solution that eliminates racks and barrels—dramatically reducing chemical drag-out, water usage, and labor costs, while improving turnaround time by up to 80%. Its continuous part-specific handling ensures uniform, repeatable finishes on complex geometries, making it ideal for high-mix, moderate-volume production in industries such as electronics, automotive, and precision components.

Rounding out the lineup, Technic's [MP500](#) systems for Electropolishing and Anodizing are designed for the medical surface finishing industry, offering precise and repeatable results with user-friendly touch-screen operation and monitoring.

About Technic

For over 80 years, Technic has been a global supplier of specialty chemicals, custom finishing equipment, engineered powders, and analytical control systems to the semiconductor, electronic component, printed circuit board, industrial finishing, and decorative industries.
